

LAVKUSH KATIYAR

JUNIOR BACKEND DEVELOPER

+91 7905837232 | worklavkush@gmail.com | Bengaluru
LinkedIn | Github | LeetCode | GeeksForGeeks

EXPERIENCE

STEP Intern at ThoughtWorks India

July 2025 – March 2026

- Built CLI-based software projects using advanced JavaScript, focusing on modular design, recursion, and cleanabstractions
- Applied structured problem-solving techniques (5W1H, decomposition) to convert vague requirements into deterministic solutions
- Utilized UNIX command-line tools such as head, grep, and cat along with shell scripting to process data and automate workflows
- Worked with HTTP client-server interactions, inspecting request/response behavior using curl and fetch
- Applied clean code principles: readable naming, small focused functions, and modular design

Trainee at Techpile Technology PVT LTD, Lucknow

July 2024 – September 2024

- Gained hands-on experience in Python, Django, and web development fundamentals through guidance training and projects.
- Worked on backend logic, database integration, and basic application workflows under mentorship. Strengthened problem-solving skills and understanding of software development best practice

PROJECTS

Kairox – AI Workflow Automation Backend (Python, FastAPI, PostgreSQL, SQLAlchemy, Alembic, JWT, Pydantic) (May 2026 – Present)

- Architected a modular backend for an AI workflow automation platform using FastAPI with a service-oriented architecture.
- Designed RESTful APIs for authentication, task management, and workflow processing with secure JWT-based authentication.
- Modeled relational database schemas using SQLAlchemy ORM and PostgreSQL, managing version-controlled migrations with Alembic.
- Engineered task dependency management with validation, UUID-based relationships, and circular dependency prevention.

Financial Record Management System

(Express.js, Node.js, PostgreSQL, Prisma ORM, JWT, Zod)

(April 2026 – May2026)

- Developed a RESTful backend for managing financial records, categories, and dashboard analytics.
- Implemented JWT authentication and Role-Based Access Control (RBAC) for secure API access.
- Designed relational PostgreSQL schemas using Prisma ORM with optimized entity relationships.
- Built modular APIs with layered architecture, request validation, and centralized error handling.

TaskFlow – Task Management Platform (Python, FastAPI, PostgreSQL, SQLAlchemy, React, Redux Toolkit, Docker) March 2026 - April 2026

- Implemented secure JWT authentication using HTTP-only cookies with dependency-based authorization for protected API endpoints.
- Designed relational database schemas using SQLAlchemy ORM, enforcing task ownership, data integrity, and authenticated CRUD workflows.
- Containerized the application using Docker Compose for consistent local development and deployment, while integrating the backend with a React-based client.

CLI Utilities (Deno, JavaScript)

- Built Unix-style head, tail, and cat command-line utilities using Deno.
- Implemented efficient file processing with line/byte operations and argument parsing.

EDUCATION

Bachelor of Computer Applications (BCA)

University of Mysore Pursuing (Online)

2025 - 2028

Diploma in Information Technology

Government Polytechnic Lucknow

2022 - 2025

ACHIEVEMENTS

- LeetCode — **200+** problems solved
- GeeksforGeeks— 50solved problems.
- Advent of Code — completed challenges in 2019 and 2025.

SKILLS

- Languages:** Python, JavaScript (Node.js, Deno)
- Backend:** FastAPI, Express.js, RESTful APIs, SQLAlchemy, Prisma ORM
- Databases:** PostgreSQL ,MongoDB , MySQL
- DevOps & Infrastructure:** Docker, Docker Compose, Linux
- Tools & Version Control:** Git, GitHub, Postman , alembic
- Frontend:** React, HTML5, CSS3, Tailwind CSS
- Concepts:** Database Design, Authentication & Authorization, REST API Design, Modular Architecture
